The Really Useful Chord Progression Poster

CHORD PROGRESSION OVERVIEW

The Major and Minor scales are the most commonly used scales in Western music. Each of these scales contains 7 notes, and each of these notes form the 'root' of its own chord. Therefore, every Major and Minor scale has its own unique 'set' of 7 chords. There are 3 types of chord used within each set - major chords, minor chords and diminished chords. This sequence of chord types used in each set is dependent on whether the scale is Major or Minor, and is defined using a simple formula.

What is a chord? A chord is simply 2 or more notes played together, usually played at the same time. Although chords can technically contain many more notes, the most common type of chord is called a 'triad', named as such because they contain 3 notes. It is triads that we will exclusively reference throughout this poster. What is a chord progression? A chord progression is just 2 or more chords played in sequence. How that sequence of chords is determined, is up to the composer. However, using the 24 sets of chords below is a good starting point, as each set contains 7 chords that already work well together, because they consist of notes from the same scale. Move between sets themselves to change the flow and mood of your composition. Once you're comfortable with triads you can start to introduce additional chords (such as dominant sevenths) to increase the complexity of your music (for more information on extended chords, please refer to The Really Useful Piano Poster). There are no hard and fast rules you must follow, and this method represents just one of the ways to come up with unique chord progressions that you enjoy. This poster aims to provide the building blocks for improvisation - the rest is up to you.

#15 Panning Rule

As you pan tracks left or right, they gradually decrease in amplitude. Boost your volumes to compensate.

#18 Too Much Reverb

Reverb is like spice, too much will drown out your mix, make sure you add it in smaller amounts

#22 The mid-range of your mix is critical

Most speakers vary in low or top end. But the mid-range is consistent. Get it right and the mix will translate well.
